AKROCHEM® CERESIN WAX

DESCRIPTION:

Akrochem Ceresin Wax is a mineral wax, which like the paraffins, consists of a group of hydrocarbons related to methane. Ceresine occurs naturally as Ozokerite; market grades are purified Ozokerite obtained from lignites. Grades are white or yellow in color, odorless, and amorphous (non-crystalline).

Ceresin waxes are important in rubber compounding due to their low acid number (less interference with cure) and inert qualities. They improve processing and the surface finish of molded goods.

The pastilled form of Ceresin wax is a convenient, easy-to-weigh form of this wax.

TYPICAL PROPERTIES:

Melt Point (Open Capillary Tube).....	145°F
Viscosity SUS @ 210°F	39
Penetration @ 77°F	11
Saponification Number.....	nil
Acid Number.....	nil
Specific Gravity.....	0.90
Color.....	white

jh 0102
 t-ceresin

Included with its product literature and upon the request of its customers, Akrochem provides product specifications and evaluations, suggested formulations and recommendations and other technical assistance, both orally and in writing (collectively the "Technical Information"). Although Akrochem believes all Technical Information to be true and correct, it makes no warranty, either express or implied, as to the accuracy, completeness, or fitness of the Technical Information for any intended use, or the results which may be obtained by any person using the Technical Information. Akrochem will not be liable for any cost, loss or damage, in tort, contract or otherwise, arising from customer's use of Akrochem products or Technical Information. It is the customer's sole responsibility to test the products and any Technical Information provided to determine whether they are suitable for the customer's needs. Before working with any product, the customer must read

and become familiar with available information concerning its hazards, proper use, storage and handling, including all health, safety, and hygiene precautions recommended by the manufacturer.
